

PG BC VIEWER

Making It Look Good!

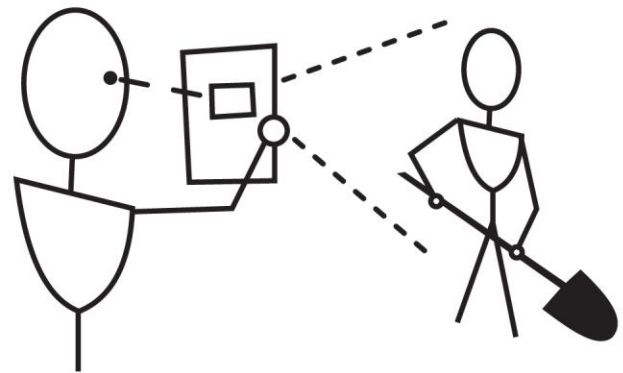

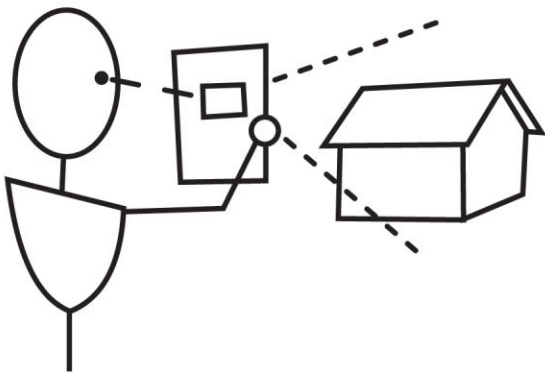

Look through the rectangle to help line up your subject that will be used on the business card design. This can be used before taking the digital photograph.

**Close one eye and
look Through Here!**

**Line up the subject
to create the best
business card.**

The PG BC Viewer works best when printed or mounted on a card stock paper.

PG BC VIEWER!

How is the building or subject going to look on the card? To help dealers select the right photo angle and position the PG BC Viewer has been developed. Stand in front of the subject to be photographed. Hold the viewer in front of your face, close one eye and look through the rectangle hole. You can now position yourself at the right distance and angle to capture the best photograph.
